

EAG GLOBAL BUILDATHON • SYDNEY • 26 SEP 2026

Know what your startup is worth, and who owns it.

Agents propose. Humans approve. Chains prove.

AI values a startup from its website with every figure cited; one human approval issues KYC-gated shares on a zero-gas chain and anchors the cap table on Ethereum and HashKey Chain.

Sydney Hackathon

Real-World Ethereum Apps

HashKey Chain • RWA

eth.blockid.au • github.com/Blockid-au/eth-blockid-hackathon

Why: startup equity still lives in spreadsheets

Founders, investors and regulators all pay for it

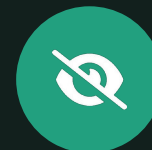

Cap tables in Excel

Share registers are emailed files.
Nobody can prove who owns what, or
when it changed.

Valuations are opaque

Early-stage valuations are expensive,
slow and rarely show their sources or
maths.

Owners can't verify

Investors trust PDFs. Dividends and
new issuances are manual and error-
prone.

A\$5.4bn across ~390 Australian startup deals in 2025 — each needs a valuation and a share register.

Source: Cut Through Venture & Folklore, State of Australian Startup Funding 2025

ELEVATOR PITCH

BlockID turns your company website into an evidence-cited valuation in minutes, then turns your shareholder list into a verified, KYC-gated cap table you can grow and pay dividends from — on-chain, with AI that never holds the keys.

1 · Agents propose

AI reads the website, finds competitors (3 searches), scores 7 SVI dimensions. A fixed formula computes the value; the report hash is recorded.

2 · Humans approve

An admin with their own wallet reviews valuation and shareholders, and signs one approval. Agents have no keys and no route to the issuer.

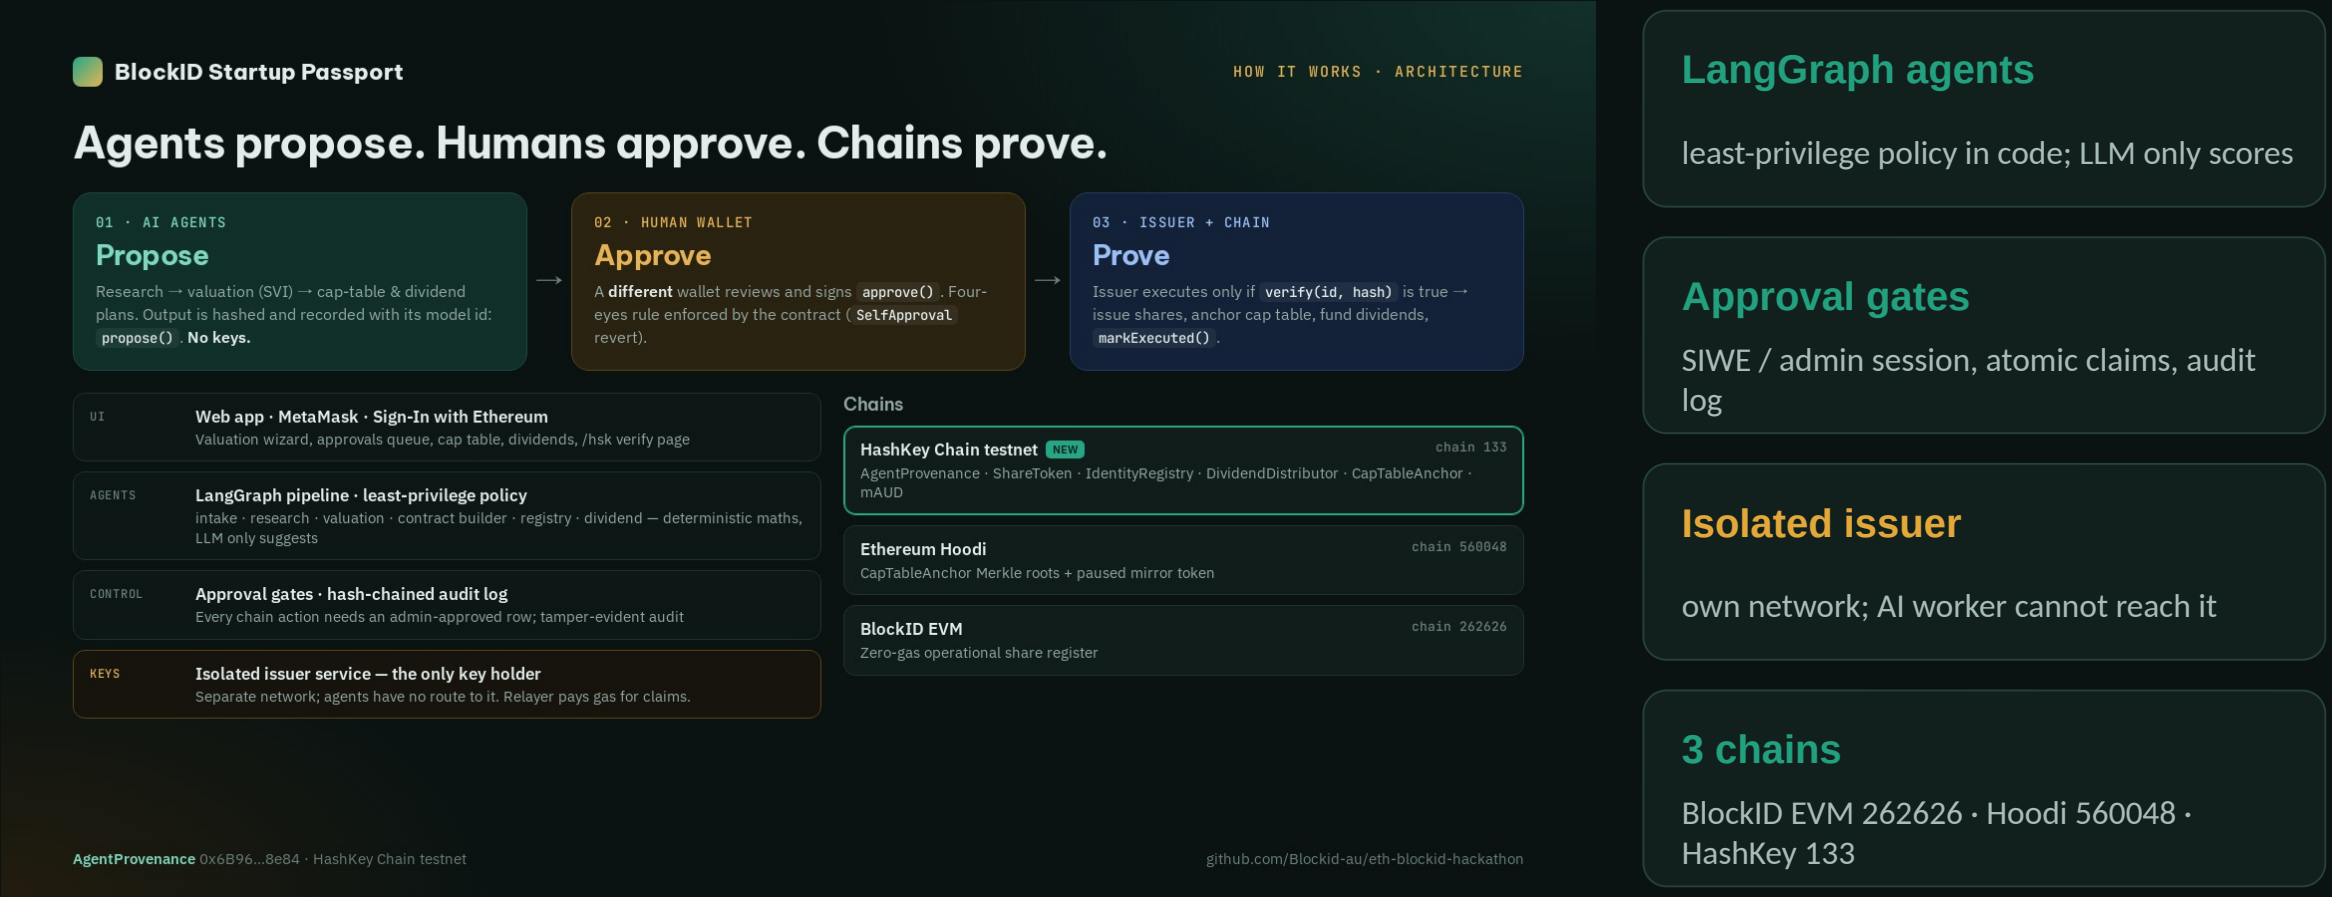

3 · Chains prove

The isolated issuer creates the register on zero-gas BlockID EVM, then mirrors and anchors it on Ethereum Hoodi and HashKey Chain.

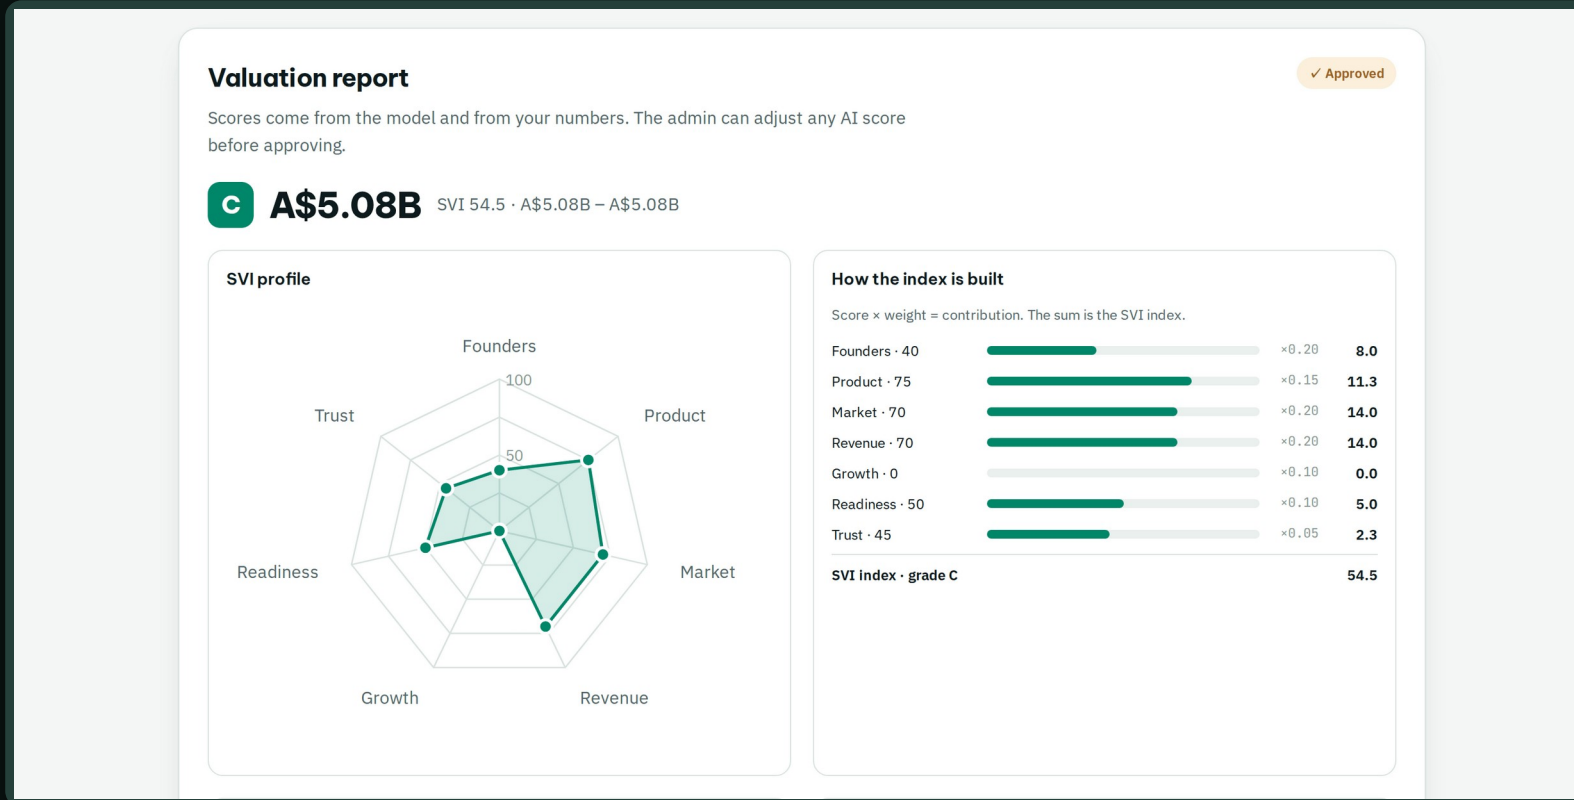

How it works

The only component with a key is an isolated issuer that acts on human-approved rows

Auditable AI valuation

LLM suggests scores · code computes · every figure links to a fetched source

6 pages + 3 searches

Bounded research budget: competitors, market, valuation benchmark

Fixed SVI formula

7 weighted dimensions → grade A–E → A\$ low · mid · high

Cited or dropped

Findings citing a page the agent did not fetch are removed

Example: Airwallex → 8 competitors from search (Wise, Revolut, OFX, Payoneer...) → SVI 54.5 (C)

One approval → three chains

Created on zero-gas BlockID EVM first, then synced to Ethereum and HashKey — live tracker for the founder

Who buys it

Start with the people who issue and administer startup equity

Founders & SMEs (AU · VN)

Valuation + share register + dividends without a law-firm bill

Accelerators & VCs

Portfolio cap tables, standard valuations, verifiable reporting

CSF intermediaries & transfer agents

Licensed partners who need compliant, auditable registers

RWA ecosystems (HashKey)

Tokenised private equity as a compliant real-world asset

REVENUE

Issuance fee

per company

Cap-table SaaS

annual

Transfer agent

per transfer

Dividends

0.5–1% per round

Custody

on AUM, via licensed partner

Built for trust and compliance

Testnet today — designed for a licensed path

Agents never hold keys

Isolated issuer on its own network, acts only on atomically claimed, admin-approved rows

KYC on every transfer

ERC-3643-style IdentityRegistry: shares can only move to verified wallets

Hardened platform

SSRF-safe crawler, CSRF origin checks, CSP, RPC allowlist, rate limits

Regulatory path

AU Digital Assets Framework (from Apr 2027), CSF / AFSL partner, audited ERC-3643

The screenshot shows the Blockscout interface for the token 'ETH BlockID Australia (EBA)' (ERC-20). The token address is 0x95A5a4b82897087B2c044b653B8e6bd617a58718. Key statistics include a max total supply of 3,650,000 EBA, 3 holders, 4 transfers, and 0 decimals. A table lists the holders with their addresses, quantities, and percentages.

Holder	Quantity	Percentage
0x02B148f774Bd3588753Ea6A17895931eD9201E2F	2,482,000	68%
0x8285cABEfac1aeC658D14121d9f32c9B1F302347	730,000	20%
0xc309691C60957A55bB619383A06d3F69A94f4585	438,000	12%

Every share token is public on scan.blockid.au (Blockscout): holders, transfers, contract

Roadmap

From hackathon to pilot

NOW · 2 weeks

- Safe 2-of-3 multisig for admin roles
- Invariant + Halmos CI for contracts
- On-chain monitoring and tracing
- Valuation eval / red-team harness

NEXT · Q4 2026

- Pilot with 5–10 AU & VN startups
- Real KYC (FrankieOne, VNPT/FPT eKYC)
- Calibrated multiples + backtests
- EAS valuation attestations

LATER · 2027

- Licensed partner / Digital Assets Framework
- Audited ERC-3643 suite, HashKey mainnet
- Scoped agent permissions (7702 / 7579)
- ERC-8004 agent identity & reputation

Try it now.

Know what your startup is worth, and who owns it.

Long Do (Đỗ Văn Long)
