

BlockID Startup Passport

Know what your startup is worth, and who owns it.

Agents propose. Humans approve. Chains prove.

AI valuation you can audit + tokenised shares you can prove — for every startup.

Sydney Hackathon • Real-World Ethereum Apps • HashKey Chain (RWA)

The screenshot shows the BlockID Startup Passport Testnet Demo interface. At the top, there's a navigation bar with links: BlockID, How it works, Companies, HashKey Chain, Verify, Admin, Testnet, EN, VI, Connect wallet, and Get my startup passport. The main heading reads "Know what your startup is worth, and who owns it." Below this, a subheading says "Give your startup a passport: valued by AI, approved by people, proven on-chain." A tagline states "AGENTS PROPOSE. HUMANS APPROVE. CHAINS PROVE." The text explains that BlockID turns a company website into an evidence-cited valuation in minutes, then turns the shareholder list into a verified, KYC-gated cap table. Two buttons are present: "Get my startup passport" and "See a sample passport". A disclaimer notes "Testnet demo. Not an offer of securities." Below this, four features are listed with checkmarks: "Valuation in minutes, every number cited", "KYC-gated cap table for verified shareholders", "Dividends in mAUD, holders pay no gas", and "One human approval, proven on 3 chains". On the right, a preview of the "eth.blockid.au" interface is shown. It displays a URL "https://harbourline.com.au" and a dashboard with four sections: "SOURCES CITED" (23 sources), "SVI VALUATION" (B \$3.36M, Range A\$2.4M - A\$4.3M - SVI 66.7), "SHARE TOKEN" (HBL, 3,360,000 shares - A\$1.00 each), and a donut chart labeled "Anchored - Hoodi + HashKey".

Website in. Cited valuation and verified cap table out.

TODAY

- Cap tables in Excel — nobody can prove ownership
- Valuations slow, costly and unsourced
- Shareholders can't verify anything

WITH BLOCKID

- Minutes: AI valuation with every figure cited
- One approval: KYC-gated shares on-chain
- Anyone can verify, on three chains

NEW VALUATION

Eight steps from website to wallet

Gold steps need a person: an admin approves the valuation, then gives one issuance approval. The sync to Hoodi and HashKey runs automatically.

▼ Add your numbers (optional, improves accuracy)

Self-reported. Shown as such in the report. A website rarely states revenue, so without these figures the revenue and growth scores stay near zero.

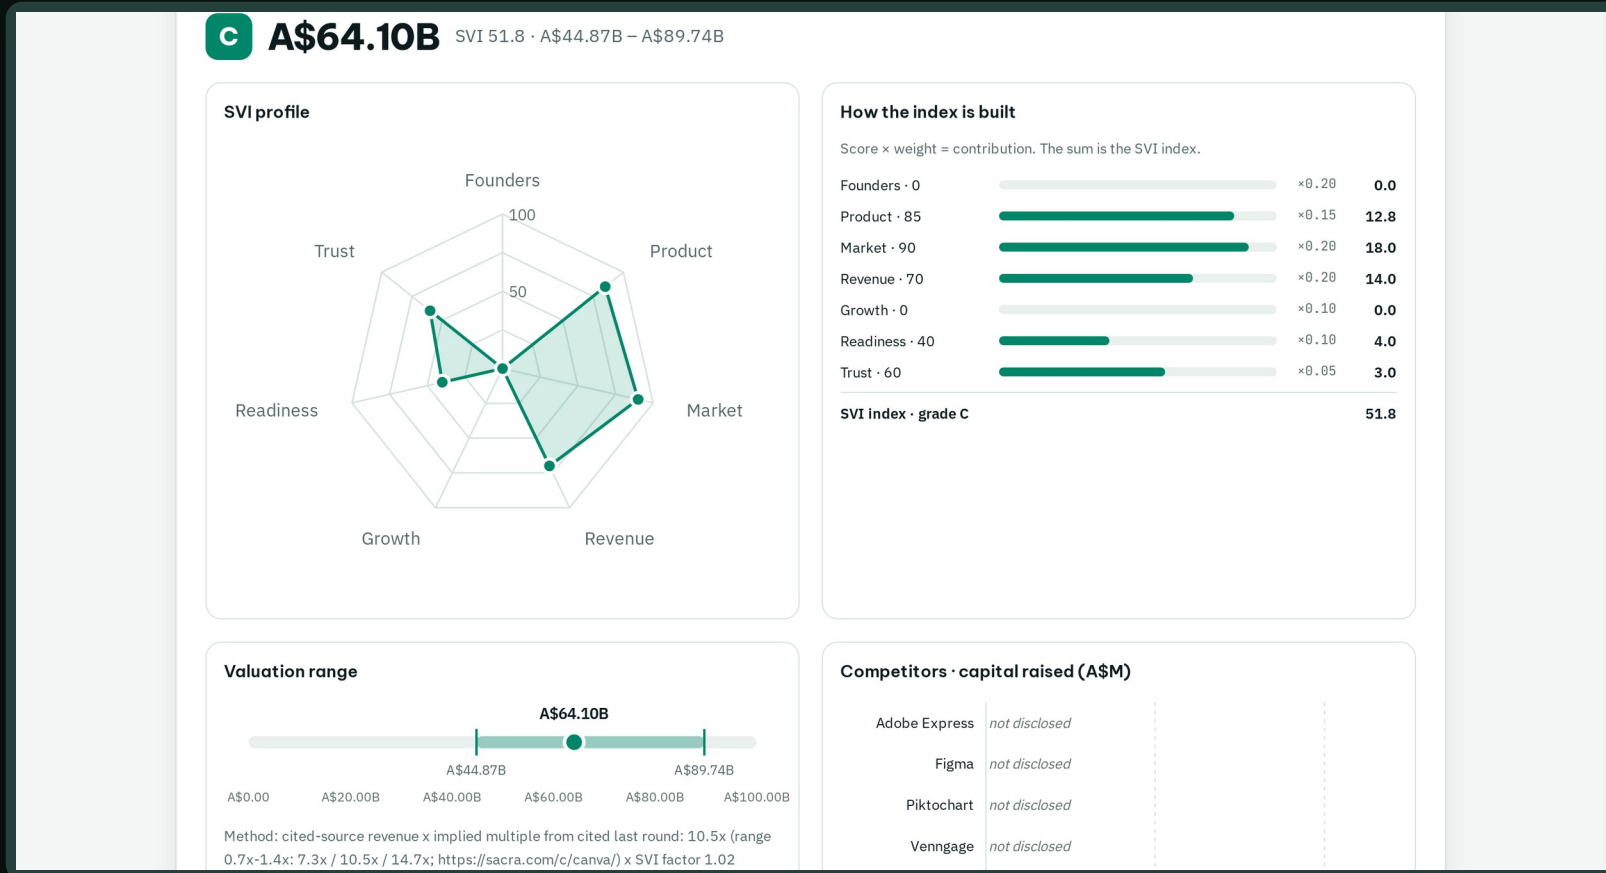

Revenue, last 12 months (A\$)	Revenue growth, year on year (%)	Gross margin (%)	Paying customers
A\$ -	- %	- %	-
Raised to date (A\$)	Runway (months)	Employees	
A\$ -	-	-	

Agents propose. Humans approve. Chains prove.

AI scores. A fixed formula decides. Every figure is cited.

- 7 SVI dimensions, fixed public weights
- Grade A-E → A\$ low · mid · high
- Uncited claims are dropped
- Admin can override any AI score

Canva: 9 competitors · ARR A\$6B cited · 10.5x implied · A\$64B mid

One approval creates the register on three chains.

Issuance tracker
Live progress of your share issuance. It updates by itself.

Now: Waiting for an admin
